PART 6. APPLICATION RECORDS

A. EQUIPMENT

INSTRUCTIONS: Complete a separate form for each piece of test substance application equipment used in the trial.

EQUIPMENT USED FOR APPLICATION NUMBER(S) _____________

EQUIPMENT IDENTIFIER1 ____________________________________________________________________________

1Each test substance application equipment must have a unique identifying name or code

APPLICATION EQUIPMENT TYPE (Check one) TRACTOR _____ BACKPACK _____ GRANULAR _____

OTHER (Describe) ________________________________________________________________________________

PROPELLANT (Check one) CO2 _____ COMPRESSED AIR _____ PUMP _____

OTHER (Describe) ________________________________________________________________________________

TYPE OF APPLICATION (Check all that apply)

1) FOLIAR _____ TO THE GROUND _____
2) BROADCAST _____ BANDED _____ DIRECTED _____ IN-FURROW _____
3) OTHER (Describe) _____________________________________________________________________________

NUMBER OF PASSES THAT ARE NEEDED TO TREAT THE PLOT _____________________________________________

NUMBER OF NOZZLES OR HOPPER OUTLETS USED

MESH SIZE USED IN THE STRAINERS SPACING BETWEEN NOZZLES OR HOPPER OUTLETS

NOZZLE BRAND/TYPE/SIZE (e.g. T-JET 8004, even flat fan):

TREATED AREA2 _________________________________________________________________________________

2Calculated width of nozzle discharge pattern (CWNDP) at proper boom height X length of plot sprayed or treated. For a broadcast application, CWNDP = (# of nozzles X nozzle spacing). For a banded application, CWNDP = # of nozzles X swath per nozzle. If application is foliar or soil directed enter row width X # of rows X length of plot sprayed or treated; treated row width may differ from actual row width when the actual row width is wider or narrower than local commercial practices. In this circumstance, the application rate should be calculated using a local commercial row width, and an explanation should be included on this page or inserted behind this page. Contact the Study Director if guidance is needed.

DOES TREATED AREA (for application rate calculations) = PLOT AREA (from Parts 5C and 5F)? YES ____ NO ____

(For foliar directed and soil directed applications, check “YES” above unless local commercial row widths are used instead of the actual row width on the research plot. This prompt is intended to help data reviewers calculate the application rates correctly.)

IF NO, PLEASE EXPLAIN: _____________________________________________________________________________

_____________________________________________________________________________________________

_____________________________________________________________________________________________

PART 6. APPLICATION RECORDS

B. DIAGRAM OF APPLICATION EQUIPMENT

EQUIPMENT USED FOR APPLICATION NUMBER(S) ______

INSTRUCTIONS: Complete a separate form for each piece of test substance application equipment used in the trial. Sketch a diagram and/or provide clear photograph of application equipment. Include the relative location and size of the target crop and the nozzle/hopper outlet placement and application pattern in relation to crop, in the sketch or photograph. In addition, on the sketch or photograph assign each nozzle or hopper outlet a unique number.

C.1. DISCHARGE CALIBRATION FOR APPLICATION NUMBER ____

INSTRUCTIONS: Complete a copy of this form (PHOTOCOPY IF NECESSARY) for additional times when a complete calibration or calibration-recheck of application equipment is required.

EQUIPMENT IDENTIFIER_____________________________________________________________________________

DISCHARGE CALIBRATION DATE__________________________ PERFORMED BY_____________ (INITIALS)

APPROXIMATE TIME OF DAY THAT THE CALIBRATION WAS PERFORMED_____________________________________

LOCATION WHERE THE CALIBRATION WAS PERFORMED______________________________________________________________________________________________

INSTRUMENT USED TO MEASURE WATER (e.g. 100 ml graduated cylinder)______________________________

BRIEFLY DESCRIBE PROCEDURE USED TO CHECK DISCHARGE CALIBRATION ________________________________________________________________

Instructions for recording Discharge Calibrations (6.C.2): Record time that applicator discharges and units measured. Collect output from each nozzle or hopper. Record this value in “RUN” column next to the appropriate outlet. Calculate the total and average discharge for all the nozzles/outlets. Entry prompts have been provided for three discharge calibration runs. For each run, calculate the total output of all nozzles/outlets, the mean output per nozzle or outlet, the nozzle or outlet discharge rate, and the total boom discharge rate in ml or grams per second. Also confirm whether the output of each nozzle or outlet during a run is within 5% of the mean output. If a recheck or confirmation of a target output is being performed, determine whether the results are within 5% of the full calibration or target. Enter all calculations on 6.C.1, below.

Total Boom Volume (sum of nozzle/outlet outputs)  
Mean per nozzle or outlet (ml or g)  
Discharge rate* (Total boom volume/time OR Mean nozzle volume/time in ml or g/second)

*Indicate whether discharge rate is calculated for: (Check one) Total Boom Volume____  Mean Nozzle Volume____

Was this a recheck of discharge calibration or a 3-run target check? (Check one) YES____ NO____

If yes, were results within 5% of original calibration or target output? YES____ NO____

If this is a 3-discharge calibration run or a 3-run target check, is each boom discharge rate (bottom row in columns 1, 2, and 3) within 5% of the mean? YES____ NO____ NA____

Are individual nozzle outputs within 5% of the mean during each run? YES____ NO____ NA____

An output consisting of an average of three runs or a target output may be used when calculating the sprayer output and amount of test substance to use. If this is a recheck (one run) then the results of the original calibration must be used. If the output result of the recheck is more than 5% different than the original calibration result, then two more runs are needed to produce a new, full calibration. The original calibration data, or a true copy, must be in this field data book.

E. DELIVERY RATE CALIBRATION FOR APPLICATION NUMBER(S) ____

INSTRUCTIONS: Complete a separate form for each application, unless the same parameters are used—your are using the same equipment, and have performed a recheck to confirm the result of the full calibration. Determine the rate of delivery from the application equipment. Briefly describe the procedure, including formulas used to determine delivery rate calibration. Show all calculations and units. Equations used in electronic (computer software) calculations in this trial must be transcribed or printed out and attached here. Computer-generated values (as opposed to those entered by the field cooperators) must be reviewed and clearly delineated by circling, initialing, and dating.

PROCEDURE/FORMULA:

CALCULATIONS:

PROTOCOL SPECIFIED SPRAY VOLUME (from Part 15, in gallons per acre or liters per hectare): _____________________
Enter “NA” if a spray volume is not applicable.

PART 6. APPLICATION RECORDS

J. POST APPLICATION RATE CONFIRMATION FOR APPLICATION NUMBER ___

APPLICATION DATE ___________________ (COMPLETE A SEPARATE FORM FOR EACH APPLICATION DATE)

CALCULATION OF ACTUAL APPLICATION RATE AND SPRAY VOLUME - Using information such as total pass time, plot size, tank mix amounts, and discharge rate (average of 3 outputs) determine the actual amount of formulated test substance applied to treated plots. Even if a target rate was used for the pre-application calculations, the data from the calibration (average of 3 outputs) must be used for calculating the application rate. (If the protocol does not include a rate of formulated product, then the amount of active ingredient should be determined.) Convert this amount to the amount applied per acre (or hectare), and determine deviation from target application in the protocol, rounded to the nearest whole percent. Show all calculations and label all units. It is not sufficient to merely compare the actual pass times to the “practice” pass times. The example formulas listed at the bottom of 6J may be used to calculate the application rate. Calculations may be entered on a separate page placed after this one, if there is not enough space below.

EXAMPLE FORMULAS: The formulas below may be used to calculate the amount of test substance (TS) applied per acre as required in Part 6J. Other formulas may be used instead; however, it is not sufficient to merely compare the actual pass times to the “practice” pass times.

1) Total Pass Time x Discharge Rate/Nozzle x #Nozzles = Volume of Tank Mix applied to Plot
2) Volume of Tank Mix applied to Plot x Amount of TS in Tank Mix = Amount of TS applied to Plot
   Total Volume of Tank Mix
3) Amount of TS applied to Plot x 43,560 sq ft per acre = Amount of TS applied per acre
   Plot area treated in sq ft
4) Volume of Tank Mix applied to Plot x 1 gallon x 43,560 sq ft per acre = Spray Volume in gallons per acre (GPA)
   3785 ml Plot area treated in sq ft

%DEVIATION FROM THE PROTOCOL RATE SHOULD BE ROUNDED LIKE THIS: -5%  OR THIS: +8%,
NOT LIKE THIS: -5.4%  OR THIS: +8.29%  OR THIS: +3.141592653589793238462643383279502884197169399%

**********************************************************************************************************

DISCHARGE RATE (ml/sec or g/sec): ________________

ACTUAL AREA TREATED (swath width or treated row or bed width x # of passes x length of plot): ________________

Note: Use bed width for plots with multi-row beds.

WAS ACTUAL APPLICATION RATE WITHIN -5% TO +10% OF PROTOCOL RATE?
   (Check one) YES___ NO___ IF NO, Contact the Study Director immediately.

WAS ACTUAL SPRAY VOLUME WITHIN THE PROTOCOL RANGE?
   (Check one) YES__ NO__ NA__ IF NO, Contact the Study Director immediately.

**PART 6 PAGE ___**  
**Trial Year 2019**

COMPLETE IF APPROPRIATE: “THIS IS A TRUE COPY OF THE ORIGINAL”

THE ORIGINAL IS IN FIELD DATA BOOK NO. ______________ INITIALS ____________ DATE _________
PART 6. APPLICATION RECORDS

L.1. DIFFERENTIATION OF MULTIPLE TRIALS CONDUCTED IN CLOSE PROXIMITY*

ARE YOU CONDUCTING MORE THAN ONE TRIAL IN THIS STUDY? YES___ NO___

IS ANOTHER FIELD RESEARCH DIRECTOR IN THIS STUDY CONDUCTING A TRIAL WITHIN 20 MILES OF YOUR TRIAL(S)? YES___ NO___

If “NO” is checked twice, then no other input is needed except for signing and dating at the bottom of each page. If “YES” is checked at least once, then an independently prepared tank-mix must be used in each trial, except in studies in which this is not applicable such as studies with granular formulations.

In order to differentiate these trials, select one option from Set 1 OR two options from Set 2.

If 3 or more trials in this study cannot be differentiated by the same options, then you should check all options that have been used, and explain below which options are differentiating between which trials.

If different crop varieties are being used as a differentiation option, then enter below information that explains why these varieties were chosen. Examples: Variety A produces large fruit, whereas Variety B produces small fruit. Variety A produces fruit with a smooth skin, whereas Variety B produces fruit with a rough skin. Varieties A and B are the two most commonly grown cultivars in this state.

If options are used that are listed in the protocol but are not listed in the table in Part 6.L.2, then enter descriptions of those options below.

Enter below any additional information that will improve the understanding of the options that have been chosen.

*Trials conducted in different calendar years are exempt from these requirements. (If separate trials by the same person or within 20 miles are conducted in late fall/early winter, then the differentiation options should be used to reduce the possibility of data rejection by a regulatory agency.)

Trial IDs of other trials in this study to which these options are being applied:

<td>A</td>
<td></td>
<td>Spray volume must vary by at least 25% of the lower volume (minimum 10 GPA difference)</td>
</tr>
<tr>
<td></td>
<td>B</td>
<td></td>
<td>Use of an adjuvant (of any suitable type) in the tank mix for one trial vs. no adjuvant in the tank mix for another trial</td>
</tr>
<tr>
<td></td>
<td>C</td>
<td></td>
<td>Different foliar application type: foliar directed or foliar broadcast (Do not use this option if the label instructions for this commodity will specify one type or the other)</td>
</tr>
<tr>
<td></td>
<td>D</td>
<td></td>
<td>Different granular application type: broadcast or banded (only if label supports both types)</td>
</tr>
<tr>
<td></td>
<td>E</td>
<td></td>
<td>Different types of application equipment be used in each trial (for example, tractor-pulled boom sprayer, tractor-pulled spreader, airblast sprayer, axial fan orchard sprayer, proptec sprayer, cannon mist sprayer, tower sprayer, over-row sprayer, tunnel sprayer, backpack sprayer, waist pack sprayer, hand gun, hand-held spreader, or shaker can)</td>
</tr>
<tr>
<td></td>
<td>F</td>
<td></td>
<td>Different spray droplet size (fine, medium, coarse, very coarse, or extra coarse) This may be accomplished by changing nozzles and/or by changing spray pressure</td>
</tr>
<tr>
<td></td>
<td>G</td>
<td></td>
<td>Different incorporation method for soil-applied test substance: mechanical or irrigation</td>
</tr>
<tr>
<td></td>
<td>H</td>
<td></td>
<td>Different band width for soil applications: band width must vary by at least 50% of the lower width</td>
</tr>
<tr>
<td></td>
<td>I</td>
<td></td>
<td>Different irrigation type (drip or furrow or sprinkler/over-the-top-Top) (Irrigation must be applied at least once after each application, but over-the-top irrigation must not be applied within one hour of an application, and irrigation is not needed following the last application if samples are to be collected on the same day)</td>
</tr>
<tr>
<td></td>
<td>J</td>
<td></td>
<td>Different planting arrangement for annual crops: single row beds or multi-row beds (two or more rows on each bed)</td>
</tr>
<tr>
<td></td>
<td>K</td>
<td></td>
<td>One trial shall have trellised plants and the other shall not</td>
</tr>
<tr>
<td></td>
<td>L</td>
<td></td>
<td>Different training system for fruit trees (for example, central leader or open center)</td>
</tr>
<tr>
<td></td>
<td>M</td>
<td></td>
<td>Different maturity of trees or bushes in fruit and nut studies—young trees or bushes in one trial and mature trees or bushes in the other (minimum 5 year age difference); all trees/bushes must be commercially productive</td>
</tr>
<tr>
<td></td>
<td>N</td>
<td></td>
<td>Different soil series, type, or texture (only in trials in which applications are made to the soil)</td>
</tr>
<tr>
<td></td>
<td>O</td>
<td></td>
<td>Different formulations of the test substance (within the types generally considered equivalent)</td>
</tr>
