07928	*	BOSCALID + PYRACLOSTROBIN (BASF)	* RADISH (01AB=ROOT VEGETABLES SUBGROUPS)	NEED E/CS DATA ONLY

<u>Region</u>	<u>Name</u>	<u>Comment</u>	<u>Date Entered</u>
WSR	Historical	<p>KH (HQ) I just found out that BASF will not support the PCR request on Coronet (boscalid + pyraclostrobin) seed treatment on radish due to “a lack of efficacy data and market size”. However, BASF mentioned that they are moving forward with the Oregon Dept. of Ag. For a SLN for this use. (RS 8/21/14)</p> <p>JD (OR)). I requested a seed treatment but HQ put my request under an existing PR#, which is not appropriate because PR#07928 is for foliar use, not seed treatment. Nonetheless, I just received today an email fromHQ saying that BASF will not support the PCR request due to “a lack of efficacy data and market size”. If iprodione seed treatment (or Syngenta’s possible support of thiabendazole) for Brassica, Raphanus and Sinapis crops gets the green light, then the lack of support for Coronet/radish may not be such a hardship. (RS 8/21/14)</p>	01/01/2018

WSR	Historical	There is considerable question about using fluazinam to control Rhizopus with this use. There is no interest in efficacy work if this is the target. There would be some interest if fluazinam control scurf (Monilochaetes infuscans) or fusarium. Fluazinam has registrations for sclerotinia, botrytis & alternaria, but not Fusarium or Monilochaetes. [SS, 10/5/15]	01/01/2018

11918 *	FLUXAPYROXAD + PYRACLOSTROBIN (BASF)	SWEET POTATO (01CD=TUBEROUS AND CORM VEGETABLES SUBGROUPS)	TOL EST; NEED E/CS DATA TO ADD CROP/PEST

<u>Region</u>	<u>Name</u>	<u>Comment</u>	<u>Date Entered</u>
WSR	Historical	<p>Sclerotium rolfsii: We have seen a significant increase in S. rolfsii in sweetpotato and currently have no effective products to control it that are labeled. Cultural management is not sufficient since the pathogen has a broad host range, making crop rotation ineffective, and no host resistance is available.</p> <p>CK (BASF) Residue tolerances for both active ingredients are established and the end-use product (PRIAXOR) is registered use on the entire Tuberous and Corm Vegetables crop subgroup 1C, which includes Sweet Potato. However, only use on potato is commercialized at this time, and includes the in-furrow use pattern. BASF is interested in the PRIAXOR on sweet potato project, but need to see proof of efficacy on the target pest (Sclerotium rolfsii) and in-field crop safety testing (at least 1 year, preferably 2) with PRIAXOR applied at use rates of 8, 16, and 32 fl ozs/A (1X, 2X, 4X) applied in-furrow. Crop safety trials need to cover 80% of commercial production in the US (leading states are NC, CA, MS) and include trials on the key varieties in each state. Until the efficacy and crop safety data is generated, BASF can respond to this PCR with project status "POTENTIAL, MFG requires E/CS data before residue study." BASF is in contact with Dr. Quesada at NCSU and will monitor the ongoing field work in 2016, looking forward to some promising results. (RS 6/9/16)</p> <p>VS (HQ) If sufficient (and acceptable) efficacy and crop safety data are generated, and since the subgroup 1C tolerance is established for both AIs including in-furrow use, would residue work still be needed? Or could sweet potato simply be added to the commercial label without another residue study? If this is correct, then I'll make the Status Category "Tol. Established, need E/CS data to add crop/pest" instead of "Potential, need E/CS data before approval for residue study." (RS 6/15/16)</p> <p>CK (BASF) No residue studies are needed for this PCR. So I agree, a better Status Category would be "Tol. Established, need E/CS data to add pest/crop". That should make it less confusing but still make it available for E/CS funding at the FUW. (RS 6/20/16)</p>	01/01/2018

WSR	Historical	<p>SAF: On usefulness to CA: Depends on how it breaks out relative to Prowl. To answer that I would need to do a side by side comparison of crop tolerance and weed control. [SF, 7/21/10]</p> <p>RB (WA): Since pendimethalin is registered on onions and has a label for both delayed pre and post, I would think ethalfluralin would not be a real high priority. The efficacy of ethalfluralin applied without mechanical incorporation is often more variable than pendimethalin too. Ethalfluralin is slightly better on nightshades, but growers would probably be using Buctril and Goal for nightshade control anyway. East side of WA is dry bulb only, green would be on the west side of the cascades. [SF, 7/21/10]</p> <p>EP (OR) I doubt that there will be much interest in the use pattern (POST) on green onion. Prowl would be a better choice because of both efficacy and cost. The more immediate need is something that works PRE. (RS 7/22/10)</p>	01/01/2018

WSR	Historical	<p>RH (ID) We are very interested in this project. Fluazifop-p-butyl/succulent peas. We would like to make this an A, at least for now. It looks like it has company support. (RS 6/13/14)</p> <p>RH (ID) This product works well in this crop, and it would give them another herbicide type for grass control. If the registrant is supportive, we would like to make this project an A or B. (RS 6/20/14)</p> <p>RH (ID) Turns out clethodim is also registered on peas, and it has the same HRAC code. Same pest lists, etc. I'm checking on prices of fluazifop vs. clethodim. But it may be that the fluazifop is not needed—guess this was a good exercise for me! I'm thinking why work on a compound with the same MOA, and target pests, unless clethodim is at risk of losing registrations. The only IPM type info would be related to price/acre. If I get something else, I'll be sure to forward to you ASAP, but for now, thinking this project should not be such a high priority. (RS 8/27/14)</p>	01/01/2018

<u>Region</u>	<u>Name</u>	<u>Comment</u>	<u>Date Entered</u>
NER	Marylee Ross	The use of linuron would be helpful for common ragweed control in the region, provided there is good crop safety. DE: not looked at linuron on snap beans or peas so not sure how good the crop safety there is; there is fair to good safety with lima beans, depending on the rate. Also, linuron is a poor herbicide for all pigweeds, including Palmer amaranth; and so not a good justification for this use. But it has value for expanding broadleaf weed control.	08/28/2018
WSR	Historical	Weeds in general. Amaranth species, especially Palmer Amaranth. Glyphosate and ALS resistant pigweed and the recent report of PPO resistant Palmer Amaranth. Also, POST products tend to cause varying degrees of crop injury.	01/01/2018

WSR	Historical	<p>MC (NM) New Mexico would be interested in pursuing a use in chile or non-bell pepper. Probably a low "B" or high "C" priority since fops have the same MOA as Clethodim and sethoxydim . According to Jill Schroeder, in NM, the use pattern and control spectrum would be similar to cotton. (RS 4/26/10)</p> <p>EN (UCCE IC) WR "A" CA request would be nice (RS 5/30/13) On his top 10 list.</p> <p>FUW changed bell to non-bell or bell and non-bell but need to include non-bell (RS 9/24/13)</p> <p>Clethodim is Registered on Peppers in CA & NM [SF 8/27/14]</p> <p>NM to check on fluazifop and see if it brings something needed to the table for chili peppers that isn't addressed by clethodim or other available herbicides. (RS 4/24/15)</p> <p>Ground water advisory on label: Chemical may leach into GW if used in areas where soils are permeable, and water table shallow. May impact surface water quality due to runoff of rain water (especially true for poorly drained soils with shallow GW). (RS 5/11/15 from Fusion label)</p> <p>PST CC NM leave as is for now; growers want whatever is the "cheapest" (RS 8/7/15)</p>	01/01/2018

07948	TETRACONAZOLE (GOWAN)	* BLUEBERRY (13-07B=BUSHBERRY SUBGROUP)	RESEARCHABLE, ONLY RESIDUE DATA NEEDED

<u>Region</u>	<u>Name</u>	<u>Comment</u>	<u>Date Entered</u>
WSR	Michael Horak	<p>KH: Although the registrant does not have efficacy data of tetraconazole on highbush blueberry diseases (Phomopsis twig blight and canker), Phomopsis is controlled in strawberry (already on tetraconazole labels), so there's some confidence that this chemistry would provide control of Phomopsis on highbush blueberry . The use pattern on the IR-4 website is in line with the approved one for strawberry.</p> <p>The registrant does not see a registration issue with IR-4 performing a residue study with this compound on highbush blueberry in 2021.</p> <p>In terms of trade, the registrant stated that there are tolerances for tetraconazole on berries in most important areas like EU and Japan.</p>	07/20/2020

<u>Region</u>	<u>Name</u>	<u>Comment</u>	<u>Date Entered</u>
WSR	Michael Horak	5/22/20 Gerald H. indicated that Flutolanil doesn't have a disease activity spectrum (Rhizoctonia and Sclerotinia) that would be beneficial to California at this time. Rhizoctonia is probably around at low levels, but I've not heard of Sclerotinia as a problem in CA strawberries. I didn't see any diseases on the various flutolanil labels that matched up well with our needs in CA strawberries. In addition, it's another SDHI, so doesn't offer a new MOA.	05/22/2020

WSR	Historical	<p>MC (GA) Needed for weed control in between plastic culture rows. Would like the product to be used in conjugation with seeding of annual grass cover crop (usually annual rye grass - turf type), so as to eliminate annual weed (Crabgrass, Evening Primrose, and others) from seed. Also, would like the product for use as a postemergence weed control in the same situation. (RS 11/12/14)</p> <p>MC (GA) : Currently no product with this use pattern, and plants in the rose family are very tolerant of this herbicide. This use pattern would hopefully eliminate many of the annual weeds coming from seed in plastic culture strawberries (in the annual rye (turf type) seeded row middles in-between the strawberries). It also has the potential to be used for post weed control in this situation to eliminate many weeds (both grasses and broadleaf). (RS 11/12/14)</p> <p>MM (WG/DC) anything that can help strawberries now that methyl bromide is gone is a much needed priority (RS 11/12/14)</p> <p>NO WR state (RS 4/24/15)</p> <p>PST CC (JD EP) OR would have value for bindweed control - would need a WR requesting state, need to assess crop safety as well (RS 6/12/15)</p> <p>PST CC removed WR priority w/o crop safety data and WR state (RS 8/9/15)</p> <p>PST CC If this project gets a green light AS (WA) interested in this for asparagus (RS 8/9/15)</p> <p>EP (OSU) Post-emergence control of field bindweed in bearing perennial strawberries. 0.25 to 0.5 lb ai/A. (RS 1/16/17)</p> <p>WR "A/B" place holder pending feedback from EP (RS 1/16/17)</p> <p>EP (OSU) WR "B" for now early stages (RS 1/27/17)</p> <p>PST CC EP (OR) may have additional crop safety data by August 1 (RS 6/6/17)</p>	01/01/2018

WSR	Historical	<p>Me too request from WA RB, would support an WR "A" if it really worked. Need data for the "A". (RS 8/11/08)</p> <p>BASF will not support therefore WR "C" (RS 8/27/08)</p> <p>IR-4 HQ checking with MANA for support (RS 8/27/08)</p> <p>VS/JD Regarding quinclorac/Albaugh, when DI sent the #10435 (blueberry), #10436 (caneberry), #08295 (asparagus) PCRs for mfg. review, she sent them to BASF, Albaugh and MANA. BASF responded will not support but no other response has come in. So I asked DI to re-send them directly to Albaugh for their response. DI note that #10211B (camelina) also should be included in this group of re-sends. (RS 8/26/09)</p> <p>One study with significant, phyto @ .5 & .75 lb rates, no phyto at .25 rate, likely to need additional data to determine rate/phyto issues. [SF/DR 4/20/11]</p> <p>BB (HQ) registrant support on other quinclorac projects (asparagus) has been weak, lack recharacterized test substance, NOF etc. (RS 9/6/11)</p> <p>BB (HQ) Perhaps the best thing that could happen at the FUW for quinclorac, asparagus would be if quinclorac, camelina received an "A" priority; then I would have characterized test substance for both camelina and for one asparagus trial. I don't think that there are any quinclorac tolerances that could be extrapolated to camelina. (RS 9/6/11)</p> <p>Phyto concerns "B" priority (RS 8/7/12)</p> <p>JD (OR) Camelina Quinclorac PR# 10211. 'A' priority if effective and we have registrant support (Albaugh). Joel Felix may have an opinion about this project. (RS 7/26/16) conveyed phyto to JD</p>	01/01/2018

WSR Historical WR "B" target 2011 unless another project takes priority for hops (RS 8/30/09)

01/01/2018

AG (WA) Thank you for your combined efforts to help us with this last-minute reconfiguration of the 2010 hop residue trials. Based on the various correspondence over the past week, I would like to propose the following:

Metrafenone - let's do 4 trials in 2010. The Europeans are headed for registration and a MRL. While their formulation may be different, it appears their GAP is similar, so hopefully we will end up with MRLs that are in the same ballpark. If not, we can deal with it later.

Quinoxifen - In addition to the 4 trials we've been discussing, I think we need to repeat the earlier trials due to GAP issues. It appears that IR-4 had been planning on a total of 11 hop trials this year. If there is any way we could increase this to 12, it would allow us to do the entire set of 8 quinoxifen trials at the precise GAP necessary to prevent any further questions by EFSA regarding that issue.

Matt Lantz and I are preparing a TASC grant proposal that will include the cost of the analytical portion of this IR-4 study. Matt Hengel is preparing the bid for this work (Matt -- please figure on samples from 8 trials). Becky -- since we are exceeding your prior allocation of 11 hop trials by one, for a total of 12, please let me know if I need to include an additional \$5,000 in the TASC grant for that trial. Doug -- Please let me know if this is going to be possible to fit into your work plan.

Looking ahead to 2011 - to comply with the normal IR-4 cycle, we will strive to have this figured out by August 2010:

Candidates are spinetoram, chlorantraniliprole, and etoxazole. I think we need to be prepared to do at least 4 more etoxazole if we haven't received some indication from EU that they are willing to bend on the 8 trial requirement -- possibly even 8, and redo the original set, due to the GAP issue (our original residue study was done for 2 applications, but our final label allows only one application per season). This would be the top priority.

If we have any space and goodwill remaining at IR-4 by that time, we could look at adding chlorantraniliprole. However, we are also going to have to determine whether 4 or 8 trials will be our target number. Spinetoram will need to wait until a subsequent year. (RS 5/24/10)

AG If no relief can be secured from EU regarding their current stance on the number of trials and GAP requirements during the next few months, it will likely be our highest priority to repeat the etoxazole residue study with 8 trials in 2011. Spinetoram and chlorantraniliprole will need to be pushed to 2012 or later, unless resources can be found to add those to the 2011 work plan. So, pencil us in for 8 etoxazole trials for 2011 at this point, and we will seek clarification prior to the September workshop (August deadline) to confirm by that time. Quinoxifen hops trials replace chlorantraniliprole and spinetoram in 2010 (RS 6/2/10)

Red "A" priority but behind quinoxifen and etoxazole. (RS 6/2/10)

I don't believe this is on the latest 5 year plan; check with AG (RS 5/13/11)

DW (WA) may be a hops project of greater priority than this one AG will get back to us next week (RS 1/16/12)

the cyflumetofen/hops project to replace this one for 2012 field season. (RS 1/27/12)

DW (WA) However we are sort of hesitant with the spinetoram. On hops we have a substantial number of caterpillar killers and in my tests chlorantraniprole has always been superior to spinetoram. Hence I think that chlorantraniprole will become the preferred product for caterpillar control for conventional hop growers once it gets registered with all the constituent export MRLs. We also have a full US tolerance for spinosad in the OMRI certified Entrust formulation. This is what any organic growers would use for caterpillar control on hops produced for the domestic US craft brewing market. At this point there is really no export of or

WSR	Ronda Hirnyck	This herbicide is weak on Amaranth spp. Therefore, it appears to be a good choice for general weed control in quinoa. Data collected at the University of Idaho Aberdeen RE Center demonstrates good crop safety and good weed control. We have discussed the project with UPL, and at this time, are supportive. This an a "A" priority.	06/28/2021
